

OBSESSED WITH HIGH RESOLUTION

K-Stream

K-Stream is a high-performance interspeaker cable created by The Chord Company for KEF to complement the exceptional LS50 Wireless. Based on Chord's award-winning C-Stream Ethernet cable, K-Stream ensures the perfect high-resolution link between the two speakers. The extra length afforded by K-Stream above the original interspeaker cable provides greater flexibility when it comes to placing the speakers.

High-performance ethernet

K-Stream delivers pristine transmission of data between the speakers thanks to its premium specification, which includes high-speed oxygen free conductors, low-loss low-density polyethylene insulation, individually shielded conductor pairs and 24ct. gold-plated signal contacts. Plus, its RJ45 connectors boast a non-compression strain relief system for improved reliability.

Flexibility and style

As well as being a high-resolution, incredibly well built and reliable cable, K-Stream is 6 metres long – double that of the cable supplied with LS50 Wireless – which makes it ideal for creating a wider soundstage or for use in installations. Plus, for the style conscious customer, it comes in a choice of three finishes that perfectly match those of the LS50 Wireless.

Feature:

- High speed oxygen-free copper conductors
- Individually shielded, twisted conductor pairs plus overall shield
- Low-loss low density polyethylene insulation
- 24ct. gold-plated signal contacts
- Over-moulded plug surround
- Non-compression strain relief system

Available in 3 finishes to match our range of LS50 Wireless speakers

Titanium/Red

Black/Blue

White/Gold
